

Septic Blaster

Cleaning Conventional Septic Systems

Septic Blaster works to remove blockage in septic lines

Septic Blaster breaks up grease & dissolves it

Septic Blaster Eliminates Pumping Septic Tanks

Septic Blaster Allows Water to Percolate Easily

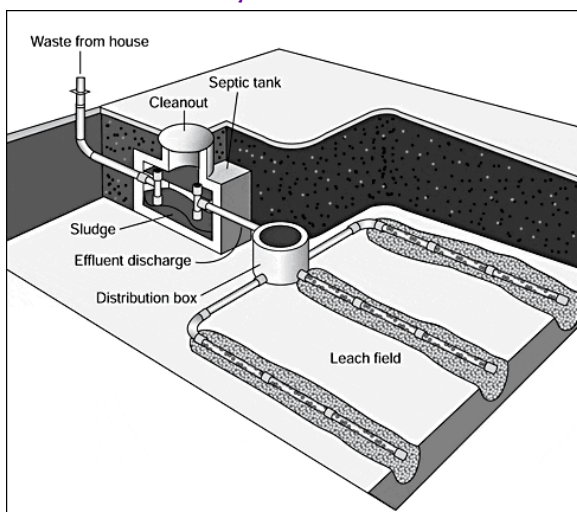

Add to Septic Systems

Best to add 1 container directly to the distribution box. Allow to settle into the lines naturally. If distribution box is not available, add 2-3 containers directly to the septic tank. Allow 2-3 weeks before best results are observed. Use monthly.

Septic Laterals & Distribution Box

Add 1/2-1 container of Septic Blaster to the distribution box. Mix in the box (use sump pump or manually mix) and move the liquified Septic Blaster to the drip field lines. Laterals: mix 2 lbs. of Septic Blaster in 5 gal water and inject or pour into lines. Add until all the lines have been treated. Allow contact time of 2-3 hours before repeating treatment. Flush system if possible with clear water.

HIGHER DOSAGE = QUICKER RESULTS
